

THE PROBLEM

Customer had a high ceiling filled with 80+ ballast operated 100 Watt High Intensity Metal Halide lamps. Constant maintenance and bulb changes which required a lift and calls to the electrician.

THE SOLUTION

The team from Victory Lights designed and installed a new LED lighting system that eliminated the ballasts and provides crisp, clear illumination.

Anfesa Matthews, owner: "The LED retro fit was a huge task, due to ceilings being 18' with a finished drywall ceiling. Victory went to great efforts in finding the right lights resulting the least amount of remodel/tear out of old lights, while ensuring the accurate lighting needed for our jewelry showroom. Victory was wonderful to work with and the staff was amazing"
